

No Basis for Positive

- A. Lab errors – sample mislabeled
 - B. Specimen contaminated
 - C. Testing unreliable
 - D. Positivity criteria not met
-
- LNDD and WADA should be accountable

Floyd Landis

ABC Slide Show

2

We have identified dozens of problems with Floyd Landis's allegedly positive doping test.

What we'll show here are some of the most important and easily understood basic problems.

We *all* depend upon laboratories.

When medical or doping laboratories perform an analysis, they must be held to the highest standards. When the conclusion is high cholesterol, cancer, or doping... our health, our lives, may depend upon the correct diagnosis.

In this case, the lab (LNDD) and WADA have failed.
